

NATIONAL INDUSTRIAL GAS PLANT · OMAN

Cylinder Operations, Finally Under Control

One platform to track every cylinder from the warehouse to the customer, capture every sale, and know exactly who did what — across all your branches.

100%

Cylinder traceability,
warehouse → customer

0

Untracked sales —
every invoice is logged

24/7

Audit trail of
every action

Web & Mobile

Multi-branch

Role-based access

Full audit log

WHY THIS EXISTS

The three leaks every cylinder business has

Missing cylinders

Between the warehouse and the customer, cylinders disappear — and no one can say where, or whose route.

Cash leaks

Hand-written invoices, cash collected but not recorded, debt that no one can reconcile at month-end.

No accountability

When something is wrong, there is no record of who changed it, when, or from where.

This platform closes all three — and proves it with data.

THE BIG PICTURE

Every cylinder, end to end

Warehouse

Stock & cylinder master

Loader hand-off

Morning load per
salesman

Salesman

Delivers & invoices on
phone

Customer

Delivery / collection

Reconcile

Loaded vs invoiced

No more "missing"

Hand-offs are recorded, so a variance
shows up per route — not at month-end.

Cash clarity

Every delivery is an invoice; debt and
collections are tracked per customer.

Accountability

Each step is tied to a person and a time,
visible in the audit trail.

WHAT YOU GET

Six capabilities, one system

Sales & Invoicing

Guided invoicing with correct totals & VAT, on phone or desktop.

Inventory & Logistics

Morning loads and daily reconciliation, route by route.

Finance & Audit

Debt, collections and write-offs — all with a paper trail.

User & Role control

5 roles, customizable permissions, branch-scoped access.

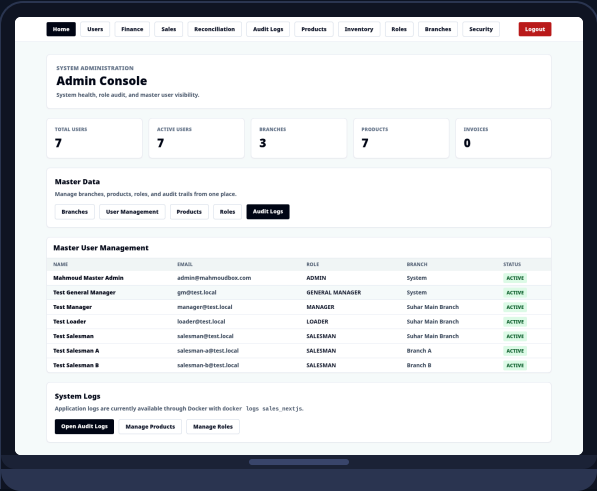

Security

Strong passwords, multi-factor login, lockout on attacks.

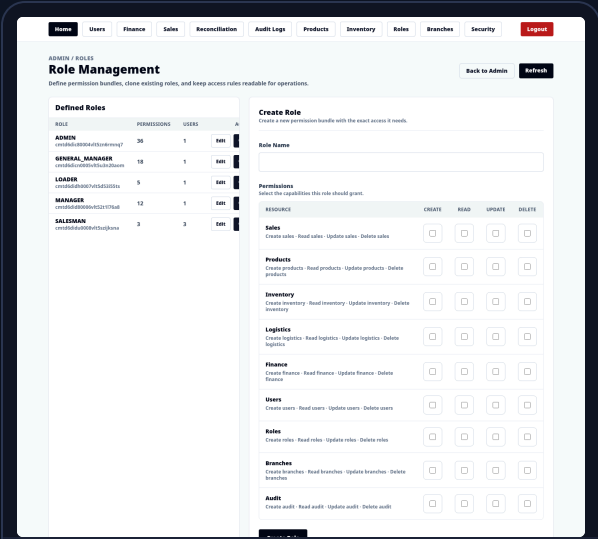

Multi-branch

One system, many branches, each seeing only its own data.

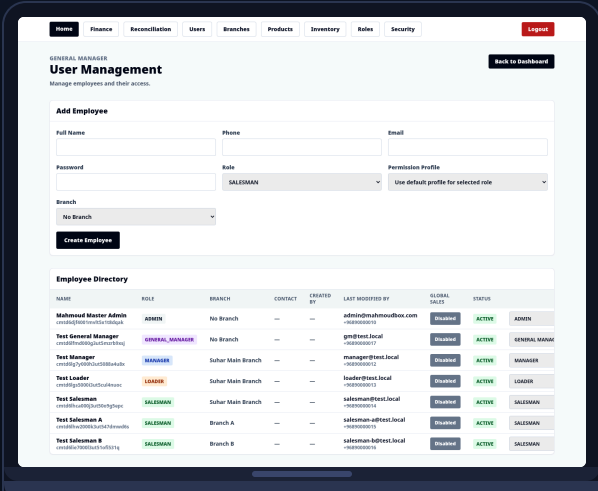

Real screens, real data

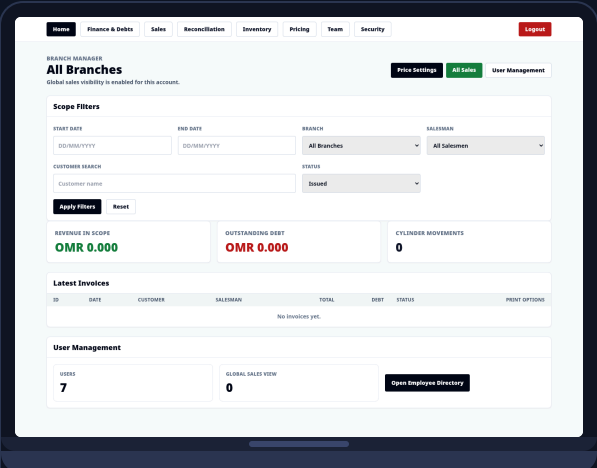

Admin console

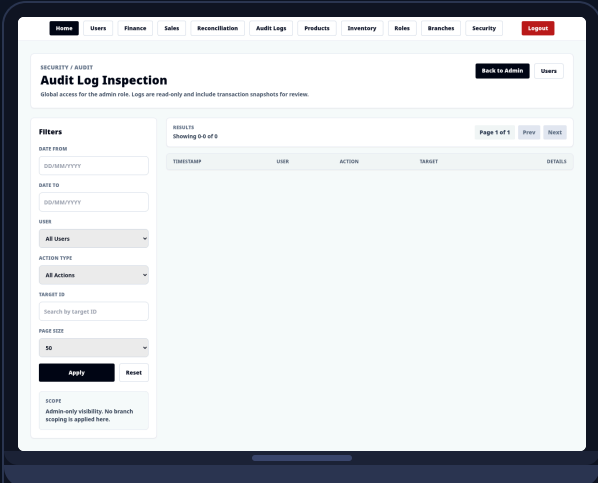

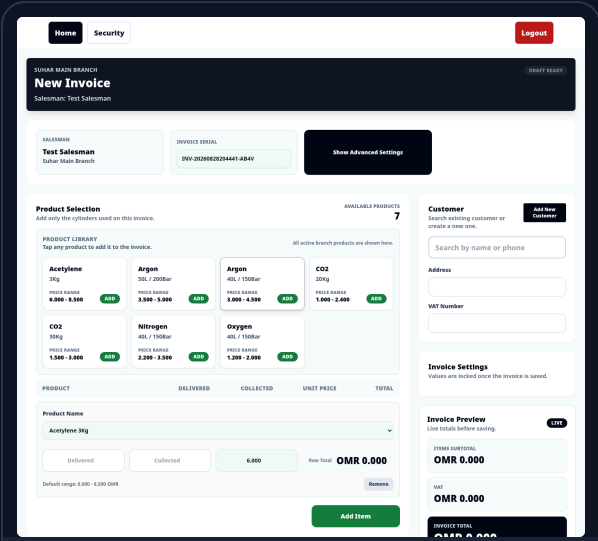

Role management

User directory

Manager dashboard

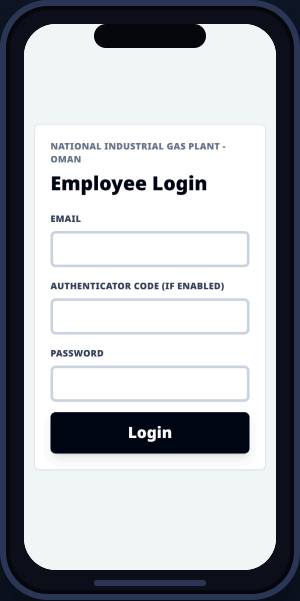

Audit logs

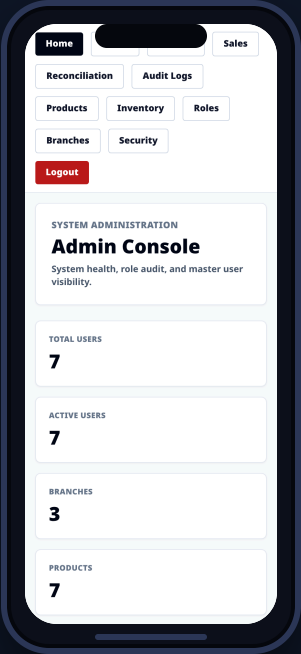

MOBILE & RESPONSIVE

Your team uses it on the road

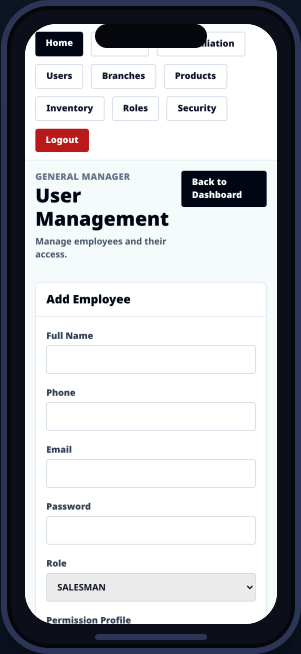

The same application, fully responsive — salesmen take orders and managers approve on their phones. No second app to build or maintain.

Order entry

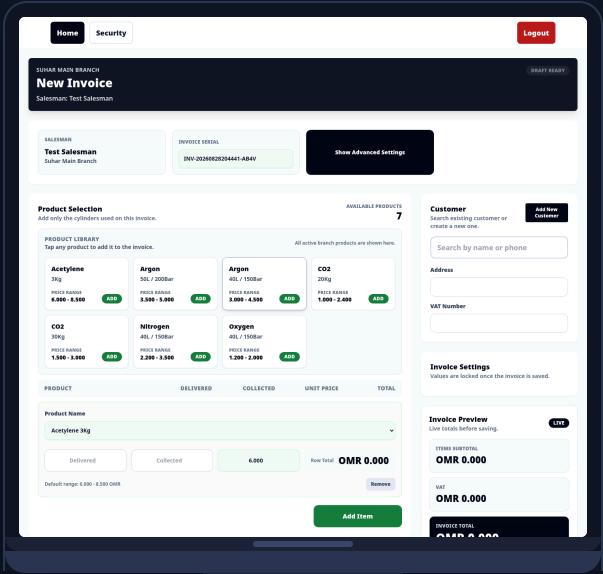

Sales & Invoicing

BEFORE

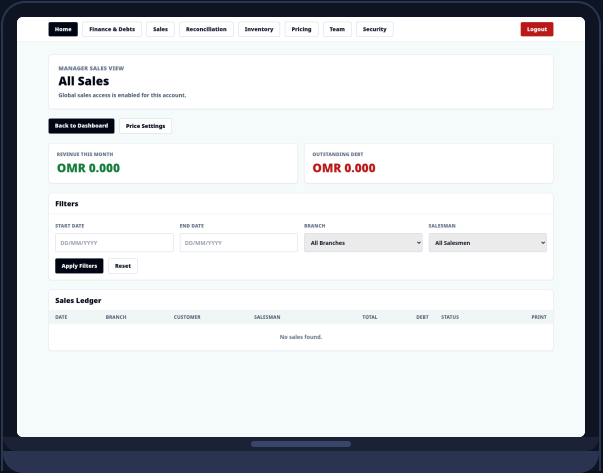

- Invoices written by hand — totals and VAT don't add up
- No record of who sold what, or when
- Salesmen can't be tracked branch by branch

NOW

- Guided invoicing with live, accurate totals & VAT
- Every sale logged with customer, cylinder, salesman
- Managers see all branch sales, filterable & auditable

New invoice — product library, live totals

Branch sales review

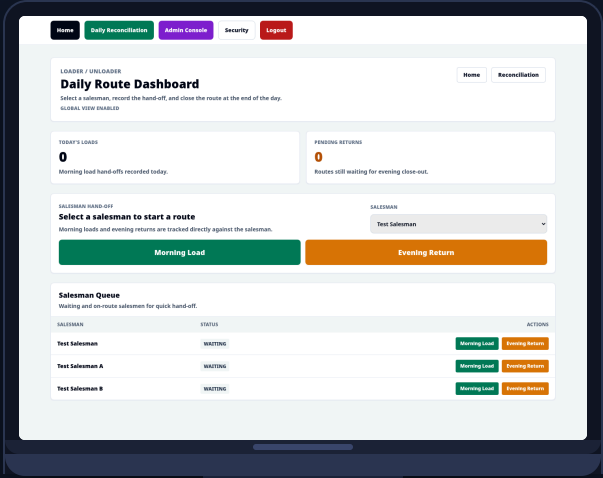

Inventory & Reconciliation

BEFORE

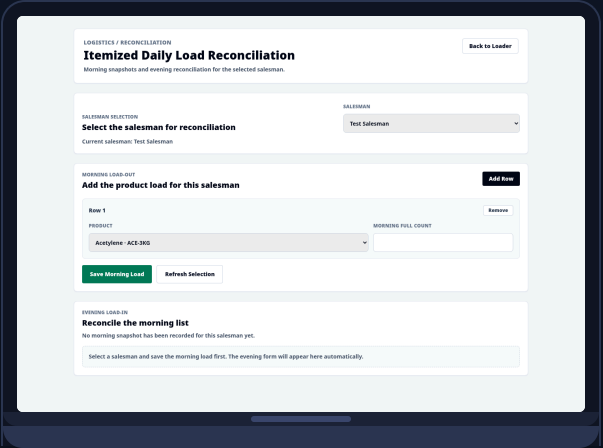

- Cylinders "disappear" between warehouse and customer
- Reconciliation done late, by memory
- Variance blamed on "the route", never traced

NOW

- Morning load recorded per salesman, per cylinder
- Evening match of loaded vs invoiced
- Variances flagged per route, immediately

Loader console

Reconciliation — variance detection

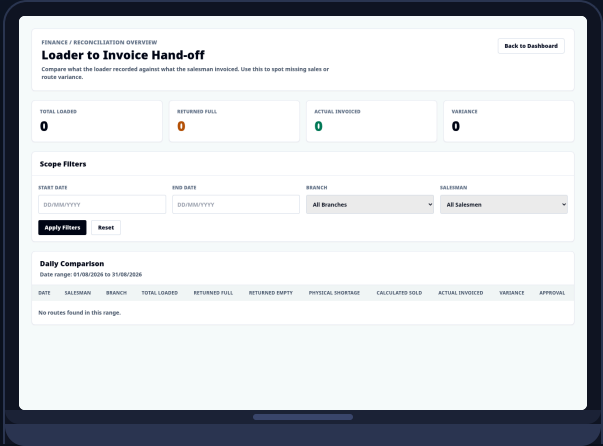

Finance & Receivables

BEFORE

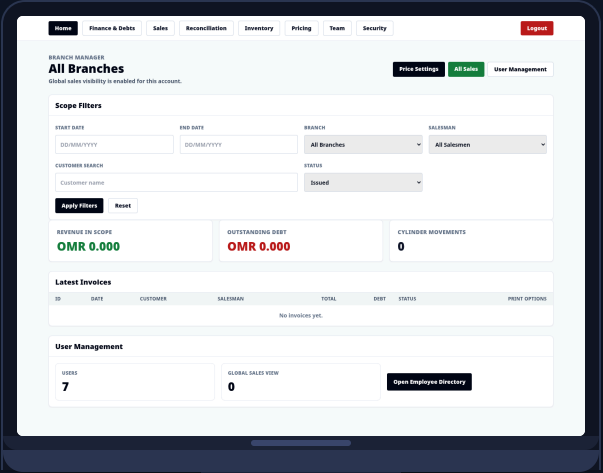

- Customer debt in notebooks or spreadsheets
- Write-offs untraceable — "who approved that?"
- No clear branch financial position

NOW

- Debt & collections per customer, per branch
- Write-offs need permission + full audit entry
- Reconciliation overview at a glance

Reconciliation overview

Manager dashboard

TRUST & CONTROL

Who can see what — and it's all logged

Right access, per role

Five built-in roles plus customizable permission profiles. A salesman sees his routes; a manager sees the branch; an admin sees everything. Branch data is scoped automatically.

Protected by design

Strong password hashing, multi-factor login with recovery codes, and lockout after repeated failed attempts.

Every action is recorded

Create, change or delete — the system logs who, what, before/after, and from where. Disputes are resolved in seconds.

You stay in control

The user directory shows who created and who last changed each account. Nothing is anonymous.

PROOF IT WORKS

Not just built — verified

✓ Code quality

Type-check and linting pass with zero errors or warnings. 16 automated tests pass.

✓ Production build

The application builds and runs as a standalone server, ready to deploy.

✓ Live tested

Protected screens correctly require login; the system reports its own health status.

✓ Real data

The screenshots in this deck are from a live, working instance — not mockups.

WHAT'S NEXT

Ready to run your branches on one screen

Next steps we recommend: automated tests on every update, a warehouse screen, bulk customer/product import, and exportable reports (reconciliation, debt aging, sales by cylinder).
